

CLIMATE CHANGE AND THE CLEAN WATER ACT

VERMONT'S ENERGY TERROIR AND THE QUESTIONS THAT AREN'T BEING ASKED

Why have environmental protection and development become mutually exclusive?

Why doesn't Vermont's application of the Clean Water Act attempt to mitigate climate change as a fundamental threat to aquatic resources?

Why does the PUC think that removal of riverine toxins has zero value in Vermont?

How can the state foster new, large-scale solar that will primarily benefit the one percent and not serve the public good?

Why has the Vermont Legislature disenfranchised the class of Vermonters who are actively trying to address climate change?

Why does Vermont fail to acknowledge its natural energy terroir, instead continuing to promote practices from which its citizens cannot reasonably benefit?

Why does Vermont continue to allow certain parties to cause species extinction and habitat degradation with no penalty?

Given our energy terroir, what is required to achieve our energy goals?

Does Vermont's planning only account for peak load and not base load?

Why are we exporting our jobs, wealth, and environmental responsibility to a foreign country?
